Small Campus. Big Degree.
INFORMATION TECHNOLOGY
You will gain the ability to work with information system hardware, messaging systems, and operating systems—all from both a global and ethical perspective.

SOFTWARE DEVELOPMENT
You will learn how to use various programming languages and application software. You’ll also work on database system design, management, and implementation.

NETWORKING
You will learn to the design, implementation, and management of an enterprise network. You’ll work with servers, routers, bridges, gateways, transmission media, communication protocols, network security, and performance tuning. Focusing on the hacking culture you will learn about the impact of computer crime and internet fraud. You’ll also touch on network/systems administration and designing and implementing protection systems.

MANAGEMENT
You will get hands on experience in developing solutions for businesses from IT perspective. You will also be able to demonstrate an understanding of the role of finance, marketing, and management as job responsibilities of the information technology professional.
